

VEERENDER MOTHUKURI

Lead DevOps / SRE Engineer

📞 720-789-0844 • ✉️ Mothukuriveerender06@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

Lead DevOps/SRE Engineer with 8+ years architecting resilient, cloud-native infrastructure across large-scale financial services and telecommunications environments. Proven track record driving platform reliability, deployment velocity, and cost-optimized FinOps strategy through automation-first engineering. Deep expertise across AWS, Kubernetes, Terraform, and modern observability tooling, with a focus on scalable, self-healing systems.

CORE COMPETENCIES

- ▶ **Cloud Platforms:** AWS, Azure, GCP
- ▶ **AI:** Claude, Gemini, Copilot, Hugging Face SDK, Windsurf.
- ▶ **Infrastructure as Code:** Terraform, AWS CDK, Ansible
- ▶ **Containers & Orchestration:** Docker, Kubernetes, ECS, EKS, Helm, Cilium
- ▶ **CI/CD:** Jenkins, GitHub Actions, GitLab CI, Concourse, Drone
- ▶ **Observability:** New Relic, Splunk, Datadog, Open Telemetry, Prometheus, Grafana, ELK, Observe
- ▶ **SRE & Reliability:** SLOs/SLIs, Error Budgets, Chaos Engineering (Gremlin), Incident Response, DR, Game Days
- ▶ **Languages:** Python, Go, Bash, SQL, Java
- ▶ **Databases:** MySQL, PostgreSQL, MongoDB, Cassandra, Document DB
- ▶ **Security & Compliance:** Snyk, DevSecOps, Palo Alto Micro-segmentation, SAST/DAST, Hashi Corp Vault
- ▶ **FinOps & Cost Optimization:** Cloud Custodian, Reserved Instances, Graviton Migration, Resource Rightsizing
- ▶ **Data & Streaming:** Kafka, AWS Glue, Step Functions, EMR, Databricks, KubeFlow, Tekton
- ▶ **Methodologies:** Agile, Scrum, GitOps, Observability as Code, Engineering Leadership

PROFESSIONAL EXPERIENCE

Lead DevOps / SRE Engineer | [Capital One \(Employer: Logic Que\)](#) — McLean, VA Jan 2025 – Present

- ▶ Drove 99%+ platform availability for core modernization platforms supporting millions of accounts via one-click failover automation, DR strategies, and chaos engineering with Gremlin.
- ▶ Reduced MTTR by ~60% by defining a Severity Matrix with product teams, implementing SLO-based alerting, and enabling pre-Severity 5 alerts to intercept issues before customer impact.
- ▶ Built end-to-end Observability as Code using Terraform OTel instrumentation, dashboards, and alerts across New Relic, Splunk, and Observe, eliminating manual observability toil.
- ▶ Deployed API and batch environments reliably using AWS CDK as IaC, supporting high-volume workloads processing millions of accounts per cycle.
- ▶ Instituted an Error Budget policy that structurally prioritized reliability improvements over new features during periods of SLO burn.
- ▶ Led zero-downtime GHES-to-GHEC migration, eliminating self-hosted GitHub infrastructure and reducing operational overhead for 500+ repos.
- ▶ Implemented automated cost optimization strategies — resource right-sizing, reserved instance planning, and idle resource cleanup & delivering measurable FinOps savings.
- ▶ Mentored engineers on SRE best practices, observability standards, and incident response protocols; improved cross-team coordination during live incidents.

Senior DevOps Engineer | [Comcast \(Employer: Logic Que\)](#) — Remote Aug 2020 – Jan 2025

- ▶ Led OpenStack-to-Kubernetes migration, eliminating ~\$7,200/month in VM infrastructure costs and improving application reliability through container orchestration.

- ▶ Reduced deployment time by 87% (40 min → 5 min) by implementing Helm-based packaging, optimizing Concourse CI/CD pipelines, and adopting GitOps practices.
- ▶ Managed DevOps support across 10+ applications spanning Python, Java, Go, Spring Boot, TypeScript, and Node.js — including builds, deployments, and environment configuration.
- ▶ Migrated SAST/DAST DevSecOps tooling from White Source and Check Marx to Snyk, improving vulnerability detection speed and developer workflow integration.
- ▶ Implemented Palo Alto micro-segmentation on AWS EKS via Helm charts, enabling secure tag-based workload isolation and network policy enforcement.
- ▶ Implemented Datadog as a unified observability platform (logs, metrics, traces) with ML-based anomaly detection, replacing fragmented monitoring tooling.
- ▶ Built Python Lambdas for event-driven automation and designed AWS Glue, Step Functions, and EMR data pipelines.
- ▶ Delivered end-to-end automation for cloud/on-prem network platforms; led OpenStack-to- Kubernetes workload migration.
- ▶ Automated configuration management with Ansible, Concourse, and Helm; designed CI/CD pipelines enabling daily deployments with zero manual gates.
- ▶ Built a monitoring stack with Splunk, Grafana, and Prometheus; improved application latency by profiling tcpdump logs and optimizing database queries.
- ▶ Automated deployments using AWS Code Deploy, ECR, ECS, and CloudFormation for scalable, repeatable release pipelines

DevOps Engineer | [Capital One \(Employer: Logic Que/Veridic Solutions\)](#) — [McLean, VA](#) *Aug 2018 – Aug 2020*

- ▶ Managed Terraform Enterprise cluster, ensuring stable state management and consistent infrastructure provisioning across teams.
- ▶ Repaired corrupted Jenkins state files and realigned Security Group configurations, preventing CI/CD disruption across 300+ dependent applications.
- ▶ Implemented Cloud Custodian off-hours shutdown policies in lower environments and right-sized workloads to Graviton instance families, reducing cloud spend.
- ▶ Built compliance remediation workflows to detect and auto-resolve policy violations, reducing audit risk and manual remediation effort.
- ▶ Administered Jenkins, including SSL configuration and HashiCorp Vault integration for secrets management.
- ▶ Automated Security Group migration using Terraform, reducing manual networking changes and enforcing consistent security policies.
- ▶ Migrated ECS-EC2-to- ECS-Fargate clusters using Bogie for Java and Go applications, reducing compute overhead and enabling serverless container scaling.
- ▶ Led Gen2 -to-Gen3 AWS account infrastructure migration, including team coordination, integration testing, and environment cleanup.

NOTABLE PROJECTS

Splunk-AI-Log-Analyzer

- ▶ Developed a Splunk AI app that ingests Nginx logs from AWS EC2, filters noise and leverages an AI agent to identify anomalies with impact levels and remediation recommendations.

Automated Nginx 5xx Resolution Bot

- ▶ Built an intelligent bot to detect and auto-remediate 5xx errors in nginx logs in real time — reducing manual triage effort and improving application uptime SLAs.

LinkedIn DevOps Job Market Analyzer

- ▶ Designed and built a data pipeline analyzing daily/weekly/monthly DevOps job postings from LinkedIn; visualized hiring trends using Plotly Dash to guide career decisions.

EDUCATION

MS, Information Technology
2015 – 2017

Colorado Technical University, CO
